Objective

"Quick learner with a strong interest in continuous improvement and leadership development. Known for adapting quickly to new challenges, embracing innovative technologies, and contributing to both individual and team success"

Skills

Languages: C, C++, SQL

Front end: HTML, CSS, JavaScript, React, UI/UX, Responsive Design

Back end: Node.js, REST APIs

Databases: SQL Server, MongoDB

Coursework: DBMS, OOPS, Operating Systems, Data Structures and Algorithms

Experience

E-Swaccha Community - Digital Team Co-Lead

Designed 15+ event posters for college club activities, ensuring consistent branding and high engagement visuals that boosted event visibility.

Remote internship at CODSOFT - Web Development intern

Built 5+ responsive web projects including a portfolio website and a JavaScript calculator applying modern UI/UX principles to improve performance, reduce load times, and deliver a smooth user experience across devices.

Education

Bangalore Institute of Technology, Bachelor of Engineering

2022 – 2026

- CGPA: 8.93

S B Residential P U, Pre University

2020 – 2022

- Percentage: 94.16%

S B R High School, High School

2019 – 2020

- Percentage: 93.28%

Project work

Question Paper Portal Website: [\[Github \]](#), Full Stack (HTML, CSS, JS, SQL, Bootstrap)

Apr 9th 2025

- Designed a full-stack web application using SQL and Bootstrap to manage previous-year and model question papers, incorporating role-based access control for Admin and Student users.
- Built a secure authentication system (sign-up and login) and implemented SQL-based data storage with structured admin, user, and question-paper tables.
- Designed a fully responsive interface using HTML, CSS, JavaScript, SQL, and Bootstrap, allowing admins to upload, search, and delete papers while enabling students to access them easily.

Blog Page: [\[Github \]](#), MERN Stack (React, Node.js, MongoDB)

Jun 7th 2025

- Built a full-stack blog application with React, Node.js, and MongoDB, featuring admin authentication, full CRUD functionality, and dynamic routing.
- Developed backend operations using API routes on Node.js runtime, integrating MongoDB for data storage and management.
- Delivered a responsive, seamless user experience by combining frontend and backend logic within a unified framework.

Loan Data EDA: [\[Github \]](#), Exploratory Data Analysis Project

Aug 20th 2025

- Imported and processed a loan dataset from CSV files using Python (Pandas, Matplotlib, Seaborn) and Excel to analyze approval trends.
- Performed data cleaning and visualization through charts and summaries for clearer insights.
- Gained exposure to financial datasets relevant to the BFSI domain through hands-on exploratory analysis.

Awards and Certificates

- Won a 2nd prize in poster presentation competition created by UI/UX design.
- Presented the Ultrasonic Radar System at Tech Fusion 2025, showcasing real-time object detection.
